Django, .NET, ASP.NET, React.js

Professional Experience

Geologic Systems Ltd. Calgary, AB

Web Developer 2018.07 – 2026.03

- Contributed to the implementation of the **Geologic OAuth platform** using **Python, Django, React.js, and Azure Active Directory**, supporting authentication, token-based authorization, and

single sign-on (SSO) across Geologic web applications.

- Conducted technical research and implemented **proof-of-concept solutions** that contributed to the foundation of the production OAuth platform.
- Developed backend **business logic, APIs, and database access components using Python and Django**.
- Managed **SQL scripts and database migrations** to support database schema changes during application development and deployment.
- Developed and maintained administrative functionality for managing **users, clients, products, and subscription data**.

- Contributed to the development and enhancement of the **Geologic Portal and Portal Admin** applications.
- Implemented **data migration and transformation processes** to migrate legacy portal and dashboard data into new application databases.
- Developed **REST API services using .NET Core and C#** to provide calculated frac data for internal QAS applications and database stored procedures.
- Supported and enhanced enterprise services, including existing **qFind SOAP services**, legacy **qFind Crawler** functionality, and new crawler implementations for customers.
- Provided technical support, troubleshooting, maintenance, and enhancements for enterprise applications and services.

pDC Software Developer 2016.02 – 2018.07

- Developed and maintained proprietary enterprise web applications using ASP.NET, C#, NHibernate, DevExpress, jQuery, CSS, and SQL.
- Participated in the **CDL Transition Project**, contributing to application development and transition activities.
- Received the **Employee of the Month award in July 2017** for contributions to the transition team.

Full Circle Data Services Ltd. Calgary, AB
Software Developer 2012.01– 2015.11

- Analyzed client requirements based on Service Order Requirements specifications and translated business requirements into application functional modules, estimated development effort, implemented application functionality, and prepared release documentation for QA and deployment teams. **Selected highlights:**
- Participated in multiple **enterprise data migration projects** for Atlas Energy, Newfield Energy, and Silverback.
- Participated in **EnCana Peloton WellView upgrade** projects, developing C# and VBA applications and add-ins supporting enterprise business processes and data.
    - Developed OIR Charge Mapper, OIR Integration Manager, Compare OIR WellView and

OIR Cost, Spinner Survey WellView 9 add-ins using C# and VBA.
    - Implemented data migration modules in MT Carve-out project using MS Access and VBA.
- Participated in **Cenovus Peloton WellView upgrade projects**, including development analysis, effort estimation, and application/report development.
    - Contributed to development analysis and effort estimating for multiple projects.
    - Developed Casing Summary and Frac & Stimulation multi-well reports using VBA.
    - Developed Regional Reports Completion/Workover Cost Summary Report using C#.

Environment Careers Organization of Canada Calgary, AB

Web & Database Applications Developer 2006.04 – 2011.12

Participated in discussions with internal clients to gather requirements for upgrades and new functional modules and developed new features for ECO Canada internal and external applications using **ASP.NET, VB.NET, JavaScript, HTML and CSS**. **Selected highlights:**

- Implemented the redesigned extranet interface my migrating existing functionality into a new framework and developing additional features using VB.NET and ASP.NET, AJAX.
- Contributed to the development of the BEAHR Learning Institute (BLI) website and internal web-based administration tools.
- Developed reporting tools used by the Marketing Department to track and analyze membership, job board, online resume, course, and communications data.

Marine Oil Exploitation Company of SINOPEC Shengli Company DongYing, China

Applications Developer 1996.07-2002.10

- Developed web & Windows applications using classic ASP and PowerBuilder 7.0
- Participated in Exploitation Database Upgrading Project, contributing to requirements gathering, business needs analysis, documentation, database schema design and data migration activities.
